Project Management Fundamentals - Simplify your projects with core project planning (Part 2/6)

Today, as their business becomes more complex, many organisations seek to simplify their projects. By decomposing projects and managing their scope, organisations are able to provide management with realistic estimates early in a project's lifecycle, reduce the risk of dreaded scope creep and improve the efficiency of both the planning process and the work performed on the project. Module 2 of the MCI Project Management Fundamentals Online Course enables organisations and individuals to simplify their projects with core project planning.
